**RADIATION ONCOLOGY PHYSICS:
A HANDBOOK FOR TEACHERS AND STUDENTS**

The following States are Members of the International Atomic Energy Agency:

AFGHANISTAN	GREECE	PAKISTAN
ALBANIA	GUATEMALA	PANAMA
ALGERIA	HAITI	PARAGUAY
ANGOLA	HOLY SEE	PERU
ARGENTINA	HONDURAS	PHILIPPINES
ARMENIA	HUNGARY	POLAND
AUSTRALIA	ICELAND	PORTUGAL
AUSTRIA	INDIA	QATAR
AZERBAIJAN	INDONESIA	REPUBLIC OF MOLDOVA
BANGLADESH	IRAN, ISLAMIC REPUBLIC OF	ROMANIA
BELARUS	IRAQ	RUSSIAN FEDERATION
BELGIUM	IRELAND	SAUDI ARABIA
BENIN	ISRAEL	SENEGAL
BOLIVIA	ITALY	SERBIA AND MONTENEGRO
BOSNIA AND HERZEGOVINA	JAMAICA	SEYCHELLES
BOTSWANA	JAPAN	SIERRA LEONE
BRAZIL	JORDAN	SINGAPORE
BULGARIA	KAZAKHSTAN	SLOVAKIA
BURKINA FASO	KENYA	SLOVENIA
CAMEROON	KOREA, REPUBLIC OF	SOUTH AFRICA
CANADA	KUWAIT	SPAIN
CENTRAL AFRICAN REPUBLIC	KYRGYZSTAN	SRI LANKA
CHILE	LATVIA	SUDAN
CHINA	LEBANON	SWEDEN
COLOMBIA	LIBERIA	SWITZERLAND
COSTA RICA	LIBYAN ARAB JAMAHIRIYA	SYRIAN ARAB REPUBLIC
CÔTE D'IVOIRE	LIECHTENSTEIN	TAJKISTAN
CROATIA	LITHUANIA	THAILAND
CUBA	LUXEMBOURG	THE FORMER YUGOSLAV REPUBLIC OF MACEDONIA
CYPRUS	MADAGASCAR	TUNISIA
CZECH REPUBLIC	MALAYSIA	TURKEY
DEMOCRATIC REPUBLIC OF THE CONGO	MALI	UGANDA
DENMARK	MALTA	UKRAINE
DOMINICAN REPUBLIC	MARSHALL ISLANDS	UNITED ARAB EMIRATES
ECUADOR	MAURITANIA	UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND
EGYPT	MAURITIUS	UNITED REPUBLIC OF TANZANIA
EL SALVADOR	MEXICO	UNITED STATES OF AMERICA
ERITREA	MONACO	URUGUAY
ESTONIA	MONGOLIA	UZBEKISTAN
ETHIOPIA	MOROCCO	VENEZUELA
FINLAND	MYANMAR	VIETNAM
FRANCE	NAMIBIA	YEMEN
GABON	NETHERLANDS	ZAMBIA
GEORGIA	NEW ZEALAND	ZIMBABWE
GERMANY	NICARAGUA	
GHANA	NIGER	
	NIGERIA	
	NORWAY	

The Agency's Statute was approved on 23 October 1956 by the Conference on the Statute of the IAEA held at United Nations Headquarters, New York; it entered into force on 29 July 1957. The Headquarters of the Agency are situated in Vienna. Its principal objective is "to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world".

IAEA Library Cataloguing in Publication Data

Radiation oncology physics : a handbook for teachers and students / editor
E. B. Podgorsak ; sponsored by IAEA
... [et al.]. — Vienna : International Atomic Energy Agency, 2005.
p.; 24 cm.
STI/PUB/1196
ISBN 92-0-107304-6
Includes bibliographical references.

1. Radiation dosimetry — Handbooks, manuals, etc. 2. Dosimeters — Handbooks, manuals, etc. 3. Radiation — Measurement — Handbooks, manuals, etc. 4. Radiation — Dosage — Handbooks, manuals, etc. 5. Radiotherapy — Handbooks, manuals, etc. 6. Photon beams. 7. Electron beams. 8. Radioisotope scanning. I. Podgorsak, E. B., ed. II. International Atomic Energy Agency.

IAEAL

05-00402

FOREWORD

In the late 1990s the IAEA initiated for its Member States a systematic and comprehensive plan to support the development of teaching programmes in medical radiation physics. Multiple projects were initiated at various levels that, together with the well known short term training courses and specialization fellowships funded by the IAEA Technical Cooperation programme, aimed at supporting countries to develop their own university based master of science programmes in medical radiation physics.

One of the early activities of the IAEA in this period was the development of a syllabus in radiotherapy physics, which had the goal of harmonizing the various levels of training that the IAEA provided. This was carried out during 1997–1998, and the result of this work was released as a report used for designing IAEA training courses. In 1999–2000 a more detailed teachers' guide was developed, in which the various topics in the syllabus were expanded to form a detailed 'bullet list' containing the basic guidelines of the material to be included in each topic so that lectures to students could be prepared accordingly. During the period 2001–2002 E.B. Podgorsak (Canada) was appointed editor of the project and redesigned the contents so that the book became a comprehensive handbook for teachers and students, with coverage deeper than a simple teachers' guide. The initial list of topics was expanded considerably by engaging an enhanced list of international contributors. The handbook was published as working material in 2003 and placed on the Internet in order to seek comments, corrections and feedback.

This handbook aims at providing the basis for the education of medical physicists initiating their university studies in the field. It includes the recent advances in radiotherapy techniques; however, it is not designed to replace the large number of textbooks available on radiotherapy physics, which will still be necessary to deepen knowledge in the specific topics reviewed here. It is expected that this handbook will successfully fill a gap in the teaching material for medical radiation physics, providing in a single manageable volume the largest possible coverage available today. Its wide dissemination by the IAEA will contribute to the harmonization of education in the field and will be of value to newcomers as well as to those preparing for their certification as medical physicists, radiation oncologists, medical dosimetrists and radiotherapy technologists.

Endorsement of this handbook has been granted by the following international organizations and professional bodies: the International Organization for Medical Physics (IOMP), the European Society for Therapeutic Radiology and Oncology (ESTRO), the European Federation of Organisations for Medical Physics (EFOMP), the World Health Organization

(WHO), the Pan American Health Organization (PAHO), the Canadian Organization of Medical Physicists (COMP) and the Canadian College of Physicists in Medicine (CCPM).

The following international experts are gratefully acknowledged for making major contributions to the development of an early version of the syllabus: B. Nilsson (Sweden), B. Planskoy (United Kingdom) and J.C. Rosenwald (France). The following made major contributions to this handbook: R. Alfonso (Cuba), G. Rajan (India), W. Strydom (South Africa) and N. Suntharalingam (United States of America). The IAEA scientific officers responsible for the project were (in chronological order) P. Andreo, J. Izewska and K.R. Shortt.

EDITORIAL NOTE

Although great care has been taken to maintain the accuracy of information contained in this publication, neither the IAEA nor its Member States assume any responsibility for consequences which may arise from its use.

The use of particular designations of countries or territories does not imply any judgement by the publisher, the IAEA, as to the legal status of such countries or territories, of their authorities and institutions or of the delimitation of their boundaries.

The mention of names of specific companies or products (whether or not indicated as registered) does not imply any intention to infringe proprietary rights, nor should it be construed as an endorsement or recommendation on the part of the IAEA.

The authors are responsible for having obtained the necessary permission for the IAEA to reproduce, translate or use material from sources already protected by copyrights.

PREFACE

Radiotherapy, also referred to as radiation therapy, radiation oncology or therapeutic radiology, is one of the three principal modalities used in the treatment of malignant disease (cancer), the other two being surgery and chemotherapy. In contrast to other medical specialties that rely mainly on the clinical knowledge and experience of medical specialists, radiotherapy, with its use of ionizing radiation in the treatment of cancer, relies heavily on modern technology and the collaborative efforts of several professionals whose coordinated team approach greatly influences the outcome of the treatment.

The radiotherapy team consists of radiation oncologists, medical physicists, dosimetrists and radiation therapy technologists: all professionals characterized by widely differing educational backgrounds and one common link — the need to understand the basic elements of radiation physics, and the interaction of ionizing radiation with human tissue in particular. This specialized area of physics is referred to as radiation oncology physics, and proficiency in this branch of physics is an absolute necessity for anyone who aspires to achieve excellence in any of the four professions constituting the radiotherapy team. Current advances in radiation oncology are driven mainly by technological development of equipment for radiotherapy procedures and imaging; however, as in the past, these advances rely heavily on the underlying physics.

This book is dedicated to students and teachers involved in programmes that train professionals for work in radiation oncology. It provides a compilation of facts on the physics as applied to radiation oncology and as such will be useful to graduate students and residents in medical physics programmes, to residents in radiation oncology, and to students in dosimetry and radiotherapy technology programmes. The level of understanding of the material covered will, of course, be different for the various student groups; however, the basic language and knowledge for all student groups will be the same. The text will also be of use to candidates preparing for professional certification examinations, whether in radiation oncology, medical physics, dosimetry or radiotherapy technology.

The intent of the text is to serve as a factual supplement to the various textbooks on medical physics and to provide basic radiation oncology physics knowledge in the form of a syllabus covering all modern aspects of radiation oncology physics. While the text is mainly aimed at radiation oncology professionals, certain parts of it may also be of interest in other branches of medicine that use ionizing radiation not for the treatment of disease but for the diagnosis of disease (diagnostic radiology and nuclear medicine). The contents

may also be useful for physicists who are involved in studies of radiation hazards and radiation protection (health physics).

This book represents a collaborative effort by professionals from many different countries who share a common goal of disseminating their radiation oncology physics knowledge and experience to a broad international audience of teachers and students. Special thanks are due to J. Denton-MacLennan for critically reading and editing the text and improving its syntax.

E.B. Podgorsak

CONTENTS

CHAPTER 1. BASIC RADIATION PHYSICS	1
1.1. INTRODUCTION	1
1.1.1. Fundamental physical constants (rounded off to four significant figures)	1
1.1.2. Important derived physical constants and relationships ..	1
1.1.3. Physical quantities and units	3
1.1.4. Classification of forces in nature	4
1.1.5. Classification of fundamental particles	4
1.1.6. Classification of radiation	5
1.1.7. Classification of ionizing photon radiation	6
1.1.8. Einstein's relativistic mass, energy and momentum relationships	6
1.1.9. Radiation quantities and units	7
1.2. ATOMIC AND NUCLEAR STRUCTURE	7
1.2.1. Basic definitions for atomic structure	7
1.2.2. Rutherford's model of the atom	9
1.2.3. Bohr's model of the hydrogen atom	10
1.2.4. Multielectron atoms	12
1.2.5. Nuclear structure	14
1.2.6. Nuclear reactions	15
1.2.7. Radioactivity	16
1.2.8. Activation of nuclides	19
1.2.9. Modes of radioactive decay	20
1.3. ELECTRON INTERACTIONS	22
1.3.1. Electron-orbital electron interactions	23
1.3.2. Electron-nucleus interactions	23
1.3.3. Stopping power	24
1.3.4. Mass scattering power	25
1.4. PHOTON INTERACTIONS	26
1.4.1. Types of indirectly ionizing photon radiation	26
1.4.2. Photon beam attenuation	26
1.4.3. Types of photon interaction	28
1.4.4. Photoelectric effect	28
1.4.5. Coherent (Rayleigh) scattering	29

1.4.6.	Compton effect (incoherent scattering)	30
1.4.7.	Pair production	32
1.4.8.	Photonuclear reactions	34
1.4.9.	Contributions to attenuation coefficients	34
1.4.10.	Relative predominance of individual effects	36
1.4.11.	Effects following photon interactions	37
1.4.12.	Summary of photon interactions	38
1.4.13.	Example of photon attenuation	40
1.4.14.	Production of vacancies in atomic shells	41
	BIBLIOGRAPHY	43
 CHAPTER 2. DOSIMETRIC PRINCIPLES, QUANTITIES AND UNITS		45
2.1.	INTRODUCTION	45
2.2.	PHOTON FLUENCE AND ENERGY FLUENCE	45
2.3.	KERMA	48
2.4.	CEMA	48
2.5.	ABSORBED DOSE	49
2.6.	STOPPING POWER	49
2.7.	RELATIONSHIPS BETWEEN VARIOUS DOSIMETRIC QUANTITIES	54
2.7.1.	Energy fluence and kerma (photons)	54
2.7.2.	Fluence and dose (electrons)	56
2.7.3.	Kerma and dose (charged particle equilibrium)	57
2.7.4.	Collision kerma and exposure	60
2.8.	CAVITY THEORY	61
2.8.1.	Bragg–Gray cavity theory	61
2.8.2.	Spencer–Attix cavity theory	62
2.8.3.	Considerations in the application of cavity theory to ionization chamber calibration and dosimetry protocols .	64
2.8.4.	Large cavities in photon beams	66
2.8.5.	Burlin cavity theory for photon beams	66
2.8.6.	Stopping power ratios	68
	BIBLIOGRAPHY	70

CHAPTER 3. RADIATION DOSIMETERS	71
3.1. INTRODUCTION	71
3.2. PROPERTIES OF DOSIMETERS	72
3.2.1. Accuracy and precision	72
3.2.1.1. Type A standard uncertainties	72
3.2.1.2. Type B standard uncertainties	73
3.2.1.3. Combined and expanded uncertainties	73
3.2.2. Linearity	74
3.2.3. Dose rate dependence	74
3.2.4. Energy dependence	75
3.2.5. Directional dependence	76
3.2.6. Spatial resolution and physical size	76
3.2.7. Readout convenience	76
3.2.8. Convenience of use	76
3.3. IONIZATION CHAMBER DOSIMETRY SYSTEMS	77
3.3.1. Chambers and electrometers	77
3.3.2. Cylindrical (thimble type) ionization chambers	78
3.3.3. Parallel-plate (plane-parallel) ionization chambers	79
3.3.4. Brachytherapy chambers	79
3.3.5. Extrapolation chambers	79
3.4. FILM DOSIMETRY	81
3.4.1. Radiographic film	81
3.4.2. Radiochromic film	84
3.5. LUMINESCENCE DOSIMETRY	84
3.5.1. Thermoluminescence	85
3.5.2. Thermoluminescent dosimeter systems	86
3.5.3. Optically stimulated luminescence systems	88
3.6. SEMICONDUCTOR DOSIMETRY	89
3.6.1. Silicon diode dosimetry systems	89
3.6.2. MOSFET dosimetry systems	90
3.7. OTHER DOSIMETRY SYSTEMS	91
3.7.1. Alanine/electron paramagnetic resonance dosimetry system	91
3.7.2. Plastic scintillator dosimetry system	92
3.7.3. Diamond dosimeters	92

3.7.4.	Gel dosimetry systems	93
3.8.	PRIMARY STANDARDS	94
3.8.1.	Primary standard for air kerma in air	95
3.8.2.	Primary standards for absorbed dose to water	95
3.8.3.	Ionometric standard for absorbed dose to water	96
3.8.4.	Chemical dosimetry standard for absorbed dose to water	96
3.8.5.	Calorimetric standard for absorbed dose to water	97
3.9.	SUMMARY OF SOME COMMONLY USED DOSIMETRIC SYSTEMS	97

	CHAPTER 9. CALIBRATION OF PHOTON AND ELECTRON BEAMS	301
9.1.	INTRODUCTION	301

9.1.1.	Calorimetry	302
9.1.2.	Fricke dosimetry	303
9.1.3.	Ionization chamber dosimetry	304
9.1.4.	Mean energy expended in air per ion pair formed	304
9.1.5.	Reference dosimetry with ionization chambers	305
9.1.5.1.	Standard free air ionization chambers	305
9.1.5.2.	Cavity ionization chambers	306
9.1.5.3.	Phantom embedded extrapolation chambers ..	306
9.1.6.	Clinical beam calibration and measurement chain	307
9.1.7.	Dosimetry protocols	307
9.2.	IONIZATION CHAMBER BASED DOSIMETRY SYSTEMS .	308
9.2.1.	Ionization chambers	308
9.2.2.	Electrometer and power supply	309
9.2.3.	Phantoms	310
9.3.	CHAMBER SIGNAL CORRECTION FOR INFLUENCE QUANTITIES	312
9.3.1.	Air temperature, pressure and humidity effects: $k_{T,P}$	312
9.3.2.	Chamber polarity effects: polarity correction factor k_{pol}	313
9.3.3.	Chamber voltage effects: recombination correction factor k_{sat}	314
9.3.4.	Chamber leakage currents	318
9.3.5.	Chamber stem effects	319
9.4.	DETERMINATION OF ABSORBED DOSE USING CALIBRATED IONIZATION CHAMBERS	319
9.4.1.	Air kerma based protocols	320
9.4.2.	Absorbed dose to water based protocols	323
9.5.	STOPPING POWER RATIOS	326
9.5.1.	Stopping power ratios for electron beams	326
9.5.2.	Stopping power ratios for photon beams	327
9.6.	MASS-ENERGY ABSORPTION COEFFICIENT RATIOS ...	328
9.7.	PERTURBATION CORRECTION FACTORS	329
9.7.1.	Displacement perturbation factor p_{dis} and effective point of measurement	330
9.7.2.	Chamber wall perturbation factor p_{wall}	331

9.7.3.	Central electrode perturbation p_{cel}	333
9.7.4.	Cavity or fluence perturbation correction p_{cav}	334
9.8.	BEAM QUALITY SPECIFICATION	335
9.8.1.	Beam quality specification for kilovoltage photon beams	336
9.8.2.	Beam quality specification for megavoltage photon beams	337
9.8.3.	Beam quality specification for megavoltage electron beams	339
9.9.	CALIBRATION OF MEGAVOLTAGE PHOTON AND ELECTRON BEAMS: PRACTICAL ASPECTS	342
9.9.1.	Calibration of megavoltage photon beams based on the air kerma in air calibration coefficient $N_{\text{K,Co}}$	342
9.9.2.	Calibration of megavoltage photon beams based on the dose to water calibration coefficient $N_{\text{D,w,Co}}$	343
9.9.3.	Calibration of megavoltage electron beams based on the air kerma in air calibration coefficient $N_{\text{K,Co}}$	345
9.9.4.	Calibration of high energy electron beams based on the dose to water calibration coefficient $N_{\text{D,w,Co}}$	346
9.10.	KILOVOLTAGE DOSIMETRY	347
9.10.1.	Specific features of kilovoltage beams	347
9.10.2.	Air kerma based in-phantom calibration method (medium energies)	348
9.10.3.	Air kerma based backscatter method (low and medium photon energies)	349
9.10.4.	Air kerma in air based calibration method for very low energies	351
9.10.5.	Absorbed dose to water based calibration method	351
9.11.	ERROR AND UNCERTAINTY ANALYSIS FOR IONIZATION CHAMBER MEASUREMENTS	352
9.11.1.	Errors and uncertainties	352
9.11.2.	Classification of uncertainties	352
9.11.3.	Uncertainties in the calibration chain	352
	BIBLIOGRAPHY.....	353

CHAPTER 10. ACCEPTANCE TESTS AND COMMISSIONING MEASUREMENTS	355
10.1. INTRODUCTION	355
10.2. MEASUREMENT EQUIPMENT	355
10.2.1. Radiation survey equipment	355
10.2.2. Ionometric dosimetry equipment	356
10.2.3. Film	356
10.2.4. Diodes	356
10.2.5. Phantoms	357
10.2.5.1. Radiation field analyser and water phantom ..	357
10.2.5.2. Plastic phantoms	357
10.3. ACCEPTANCE TESTS	358
10.3.1. Safety checks	359
10.3.1.1. Interlocks, warning lights and patient monitoring equipment	359
10.3.1.2. Radiation survey	359
10.3.1.3. Collimator and head leakage	360
10.3.2. Mechanical checks	361
10.3.2.1. Collimator axis of rotation	361
10.3.2.2. Photon collimator jaw motion	361
10.3.2.3. Congruence of light and radiation field	362
10.3.2.4. Gantry axis of rotation	363
10.3.2.5. Patient treatment table axis of rotation	363
10.3.2.6. Radiation isocentre	364
10.3.2.7. Optical distance indicator	364
10.3.2.8. Gantry angle indicators	365
10.3.2.9. Collimator field size indicators	365
10.3.2.10. Patient treatment table motions	365
10.3.3. Dosimetry measurements	365
10.3.3.1. Photon energy	366
10.3.3.2. Photon beam uniformity	366
10.3.3.3. Photon penumbra	366
10.3.3.4. Electron energy	367
10.3.3.5. Electron beam bremsstrahlung contamination ..	367
10.3.3.6. Electron beam uniformity	368
10.3.3.7. Electron penumbra	368
10.3.3.8. Monitor characteristics	368
10.3.3.9. Arc therapy	370

10.4. COMMISSIONING	370
10.4.1. Photon beam measurements	370
10.4.1.1. Central axis percentage depth doses	370
10.4.1.2. Output factors	371
10.4.1.3. Blocking tray factors	373
10.4.1.4. Multileaf collimators	373
10.4.1.5. Central axis wedge transmission factors	374
10.4.1.6. Dynamic wedge	375
10.4.1.7. Transverse beam profiles/off-axis energy changes	376
10.4.1.8. Entrance dose and interface dosimetry	376
10.4.1.9. Virtual source position	377
10.4.2. Electron beam measurements	378
10.4.2.1. Central axis percentage depth dose	378
10.4.2.2. Output factors	380
10.4.2.3. Transverse beam profiles	383
10.4.2.4. Virtual source position	383
10.5. TIME REQUIRED FOR COMMISSIONING	384

CHAPTER 16. RADIATION PROTECTION AND SAFETY IN RADIOTHERAPY	549
16.1. INTRODUCTION	549
16.2. RADIATION EFFECTS	550
16.2.1. Deterministic effects	550
16.2.2. Stochastic effects	550
16.2.3. Effects on the embryo and foetus	551
16.3. INTERNATIONAL CONSENSUS AND RADIATION SAFETY STANDARDS	551
16.4. TYPES OF RADIATION EXPOSURE	552
16.5. QUANTITIES AND UNITS USED IN RADIATION PROTECTION	554
16.5.1. Physical quantities	554
16.5.2. Radiation protection quantities	554
16.5.2.1. Organ dose	555
16.5.2.2. Equivalent dose	555
16.5.2.3. Effective dose	556
16.5.2.4. Committed dose	557
16.5.2.5. Collective dose	558
16.5.3. Operational quantities	558
16.5.3.1. Ambient dose equivalent	558
16.5.3.2. Directional dose equivalent	558
16.5.3.3. Personal dose equivalent	559
16.6. BASIC FRAMEWORK OF RADIATION PROTECTION	559
16.7. GOVERNMENTAL REGULATION AND NATIONAL INFRASTRUCTURE	560
16.8. SCOPE OF THE BASIC SAFETY STANDARDS	561
16.9. RESPONSIBILITIES FOR IMPLEMENTATION OF BASIC SAFETY STANDARDS REQUIREMENTS	562
16.10. SAFETY IN THE DESIGN OF RADIATION SOURCES AND EQUIPMENT	562
16.10.1. Equipment	563
16.10.2. Sealed sources	565
16.10.3. Safety in the design of facilities and ancillary equipment	567
16.10.3.1. Manual brachytherapy	567
16.10.3.2. Remote control brachytherapy and external beam radiotherapy	569

16.11. SAFETY ASSOCIATED WITH ACCEPTANCE TESTS, COMMISSIONING AND OPERATION	570
16.11.1. Safe operation of external beam radiotherapy	572
16.11.2. Safe operation of brachytherapy	572
16.11.2.1. Safe operation of manual brachytherapy	574
16.11.2.2. Safe operation of remote control afterloading brachytherapy	575
16.12. SECURITY OF SOURCES	575
16.13. OCCUPATIONAL EXPOSURE	577
16.13.1. Responsibilities and conditions of service	577
16.13.2. Use of dose constraints in radiotherapy	577
16.13.3. Investigation levels for staff exposure in radiotherapy ...	578
16.13.4. Pregnant workers	578
16.13.5. Classification of areas	579
16.13.6. Local rules and supervision	579
16.13.7. Protective equipment and tools	580
16.13.8. Individual monitoring and exposure assessment	580
16.13.9. Monitoring of the workplace	581
16.13.10. Health surveillance	581
16.13.11. Records	582
16.14. MEDICAL EXPOSURE	583
16.14.1. Responsibilities for medical exposure	583
16.14.2. Justification of medical exposure	584
16.14.3. Optimization of exposure and protection	584
16.14.4. Calibration of radiotherapy sources and machines	585
16.14.5. Clinical dosimetry	587
16.14.6. Quality assurance for medical exposure	587
16.14.7. Constraints for comforters and visitors	589
16.14.8. Discharge of patients	589
16.14.9. Investigation of accidental medical exposure	590
16.15. PUBLIC EXPOSURE	591
16.15.1. Responsibilities	591
16.15.2. Access control for visitors	591
16.15.3. Radioactive waste and sources no longer in use	591
16.15.4. Monitoring of public exposure	592
16.16. POTENTIAL EXPOSURE AND EMERGENCY PLANS	592
16.16.1. Potential exposure and safety assessment	592

16.16.2.	Mitigation of consequences: emergency plans	593
16.16.2.1.	Lost source	593
16.16.2.2.	Stuck source	594
16.16.2.3.	Contamination	595
16.16.2.4.	Off-site accidents	595
16.16.2.5.	Patient accidental exposure	595
16.17.	GENERAL SHIELDING CALCULATIONS	596
16.17.1.	Step one: Design dose in occupied areas (annual dose and weekly dose)	597
16.17.2.	Step two: Calculation of the radiation field (air kerma in air) in the occupied area without shielding .	598
16.17.3.	Step three: Attenuation by shielding barriers	599
16.18.	TYPICAL LINAC INSTALLATION	600
16.18.1.	Workload	600
16.18.2.	Calculation of the primary barrier transmission factor ...	602
16.18.3.	Calculation of the scatter barrier transmission factor ...	603
16.18.4.	Calculation of the leakage barrier transmission factor ...	603
16.18.5.	Determination of barrier thickness	604
16.18.6.	Consideration of neutron production in a high energy linac	605
16.18.7.	Door of a linac room	605
16.18.8.	Other considerations	606
16.19.	SHIELDING DESIGN FOR BRACHYTHERAPY FACILITIES	606
	BIBLIOGRAPHY.....	607
	INTERNATIONAL ORGANIZATIONS	611
	ABBREVIATIONS	613
	SYMBOLS	619
